The Yokogawa Group puts the highest priority on safety with its provision of high-quality and highly reliable backward-compatible systems, maintenance services, consulting, and other solutions, and aims to benefit society through the co-creation of value with its customers.

Working with its customers throughout the 30-year or so lifecycle of their plant facilities, Yokogawa has developed close relationships based on trust. This customer base is Yokogawa’s most important asset, and it underpins the ongoing development of the Company’s business.

On the firm foundation of this customer base, Yokogawa is expanding the scope of its solutions to cover entire value and supply chains, thereby leading to the co-creation of even more value for its customers.

Mindful that high precision and long-term stability are essential attributes of Yokogawa products, we are globalizing our production operations based on the quality-first principle. We aim to achieve a total optimization of operations that will enable the global delivery of uniform-quality products at an appropriate cost and with a short turnaround time.

Yokogawa has set sustainability indicators for efficient use of water resources, reduction of energy use, and reduction of greenhouse gas emissions at its Group company offices and factories, and has promoted the environmental management.

The Company has set a long-term greenhouse gas emissions reduction target for the year 2030 based on the 2 degrees Celsius target defined in the Paris Agreement.

See Initiatives Aimed at Achieving Sustainability Goals on p. 34 for details.
As the Yokogawa Group works to provide customers services and other solutions that capitalize on the superior skills and rich expertise of its workforce, it accumulates knowledge and expertise and comes up with new ideas, and in so doing expands its intellectual capital. This is a virtuous cycle and it is working effectively.

For the efficient utilization of its engineering resources, the Group has global delivery centers at five locations around the world that play a vital role in gathering and sharing engineering know-how.
